

Polaris Turbo Turtle

For all aboveground pools.
Vacuums and sweeps.

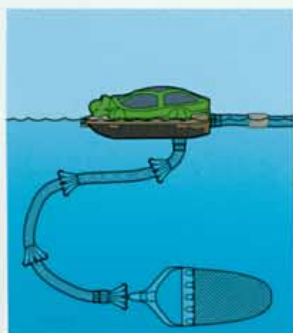

The pool cleaner for those who just want to have fun.

 **Polaris**
Your pool. Our reputation.

You love having a pool, but hate cleaning it. After 35 years in the pool equipment business, no one understands this better than we do. We've designed the Polaris Vac-Sweep® Turbo Turtle™ to be a quick and painless way to clean your pool.

The pressure of clean water returning to your pool powers the Turbo Turtle, leaving both the filter and skimmer free to eliminate contaminants.

It vacuums and sweeps.

The Polaris Turbo Turtle vacuums the bottom and sweeps the sides of any aboveground pool. It does this in three hours or less, even if you have an uneven-bottom pool up to five feet deep. The Turbo Turtle can be installed

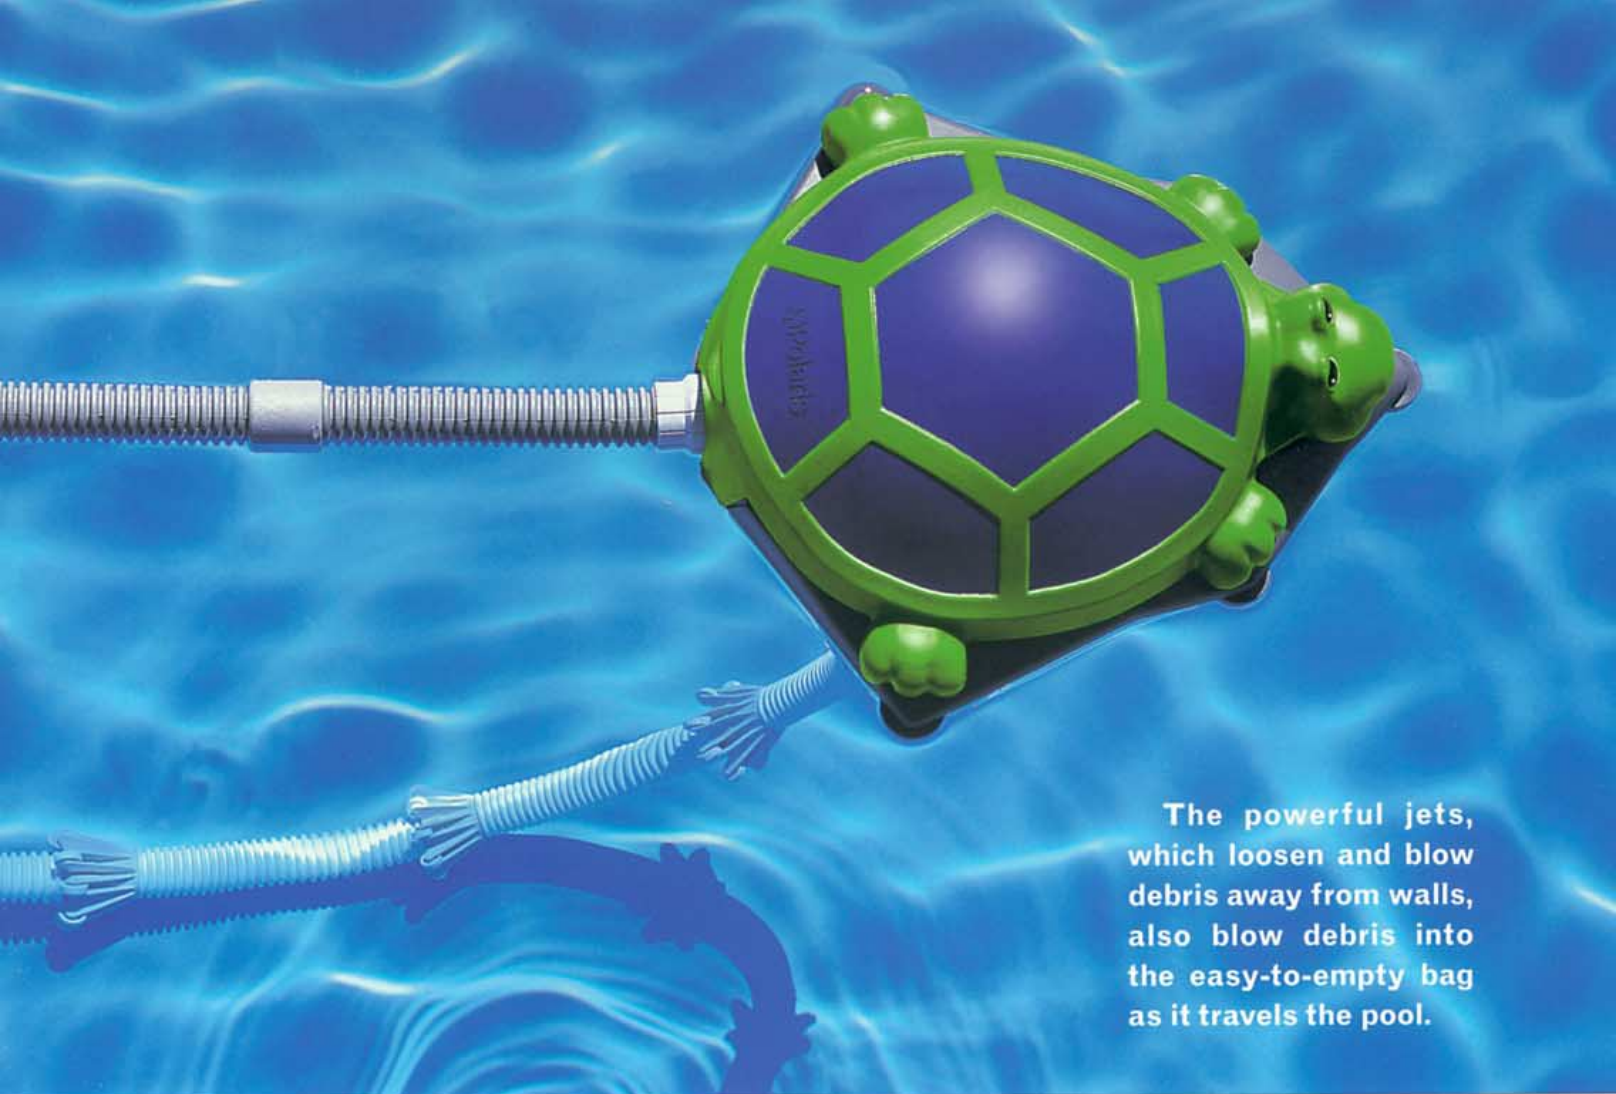

in minutes and is designed to operate with the pumps and filtration systems normally found in aboveground pools.

Nothing escapes the Polaris Turbo Turtle.

The Polaris Turbo Turtle uses a patented jet sweep assembly. It blows water against the pool wall to loosen debris in hard-to-reach places, like behind the pool ladder. The debris is then blown by the jets into an easy-to-remove filter bag.

It's easier on your filter.

The Turbo Turtle is one of the few cleaners powered by the pressure of clean water returning to your pool. Its unique filter bag removes any debris before it reaches your pump basket or filter. This alone can reduce filter cleanings by up to 80% a year,

The powerful jets, which loosen and blow debris away from walls, also blow debris into the easy-to-empty bag as it travels the pool.

thus prolonging the life of your filtration system. With the Polaris Turbo Turtle, your filter is free to cleanse the water, and your skimmer is ready to clean the top six inches of your pool where 75% of the bacteriological contaminants live.

We're here for your pool.

The Turbo Turtle comes with the legendary Polaris reputation for superior engineering, quality and support.
